Davis Calibration Increases Capability with New Kent, Washington Location

Kent, WA – May 9, 2007 – Davis Calibration , a world leader in the calibration and distribution of test and measurement and control instrumentation, has combined its three Pacific Northwest locations to create one calibration lab with world-class capabilities.

The new Kent lab is 18,000 square feet and is located near the former GE Instrumentation Services lab. With extensive capabilities and support, once completed, the new lab will house about 30 employees, half of which will be technicians. The former Kent and Redmond locations are currently in the new lab with the Seattle lab expected to move in the next 30-60 days. Added capabilities for the new location include a new Hart Scientific temperature laboratory, increased force calibrations with a United Testing 100,000+ load system, full range of AC-DC to uWave electronics, and a new Pratt & Whitney Lab Master to provide direct reading laser measurements of physical dimensional assets. Davis Calibration expects the service support and capability will enable the lab to perform more calibrations for a greater portion of its customer base.

The new location information is as follows:

20811 84th Avenue South, Suite # 101
Kent, Washington 98032

(425) 286-1085 Phone
(425) 286-1093 Fax
(800) 520-6302 Toll-free
